

N O V A

Active strand LED string

O R I G I N

Active strand LED string.

10-25 LEDs
Ships with ten LEDs as standard but is able to support up to 25.

Additional
Provides ability for additional active patterns/objects beyond initial 70 Pulsars.

Compatible
Compatible with wide range of shapes and sizes of off-the-shelf USB battery packs.

Nova delivers an active LED solution for props and objects in Vicon's Origin ecosystem. Designed for compatibility with a wide range of shapes and sizes of off-the-shelf USB battery packs, Nova is quick and easy to add to props for use in your LBVR experience.

Taking power via a standard USB connection on the prop, the LBVR operator has one less thing to monitor, making for a more efficient operation.

The Nova kit allows for optimum flexibility, and can ultimately adapt to any prop size and shapes with different LED mounting options and so increases freedom for content developers. A fully immersive and interactive entertainment experience is now easier than ever to create – and the possibilities are endless.

A new world awaits.
